

Now Available

The **HotWrap™** Drum Blanket Heater

Heat That BioDiesel Drum!

Included FREE! TopHat™ Drum Top Insulated Cover!

Now Safely Transfer Your Biodiesel in the Winter!

- Auto-heat safety control maintains preferred temperature
- **Included FREE**, easy mounting, insulated drum-top cover
- Cover cut-out port for easy access to the drum bung hole
- Single wall insulation (also available in double wall insulation)
- With EasyMount belt closure, for secure, safe mounting

Model No. DM-55DHB/1M, **metal** drum **HotWrap™** heater 110 or 240 volt, 50-60Hz, 240 watt, settings from 50 - 120°F max. temp.

Model No. DM-55DHB/1P, **plastic** drum **HotWrap™** heater 110 or 240 volt, 50-60Hz, 240 watt, settings from 50 - 120°F max. temp.

This insulated heated blanket is for heating standard 55 gallon (210 liter) metal or plastic drums of biodiesel fuel. The preset auto-heat control prevents overheating and saves energy. A standard preset temperature choice of 50°F to 68°F for keeping biodiesel just warm enough to prevent sludging and for easier transfer. The **HotWrap™** can also maintain approximately 50°F (10°C) increase in temperature over most outside ambient temperatures if suitably weather sheltered.

Winter Drum Heating with Energy Efficiency!

The **HotWrap™** drum heater offers the most uniform distribution of heat available - while being the most economical method of keeping 55 gallon drums of biodiesel at operating temperatures or protection from freezing.

Using an integral insulating layer with durable vinyl outer jacket, the **HotWrap™** heat energy is almost entirely directed inward toward the drum's contents. Little heat is dissipated outwardly as with other drum heating methods. 10 square feet of heating contact area makes this heating method more uniform than other drum heaters. There is no need to worry about your biodiesel being overheated with the **HotWrap™** drum heater. It can keep drum contents up to 50°F warmer than the ambient temperature. (Some temperature limitations apply.)

Now with **EasyMount™** Wrap Closure

The **EasyMount™** belt closure provides easy, trouble-free, mounting and easy dismounting from drum-to-drum. It quickly, cinches straps up for maximum tightness to the drum wall reducing the possibility of thermal loss. This durable, light weight, insulated covering is ideal for both indoor and outdoor (under shelter) use.
