# EXTREME POURING SOLUTIONS...

DRUM-MATES® line of **XtremeDuty™** hand dispensing nozzles accurately dispense virtually any liquid compatible with Teflon. The nozzle offers controlled, safe fluid transfer from pumps or fine gravity dispensing from drums, totes and storage tanks.

Used for extreme duty liquid transfer operations in industries including chemical, food, beverage, medical, aerospace, nuclear, biosciences, research, agriculture and other allied industries. By preventing spillage during critical transfer tasks it helps ensure greater operator and environmental safety. It also simplifies bulk liquid dispensing or repacking of liquid products into smaller containers. Smooth ball valve action enables easy trickle to full flow operation. The nozzle has heavy wall construction for extra strength and maximum opening flow path to minimize foaming or shear effects.

The DM-1000HFR Series hand nozzle line provides flow rates up to 80 Gpm at 60 Psi, with choice of ½, ¾ or 1" Npt base.

An **XtremeDuty™** stainless steel version is also available.
