The ThreadGuard Solution

For sustainable bung thread protection.

A new safety tool for sustainable thread protection now helps cut losses on all kinds of plastic 2" NPT bung hole mounting equipment. The new DM-55BTG ThreadGuard™ from DRUM-MATES is an equipment thread protection device that can pay for itself in its first use. Process devices - some, very expensive - such as plastic pumps, level sensors, pH monitors, sensitive metering equipment, bung faucets, funnels, etc. require regular replacement due to plastic-on-steel, thread misalignment damage - cross threading.

Maintenance operators are constantly trying to prevent cross threading that causes destruction of equipment, loss of use and the subsequent need for equipment replacement. The new ThreadGuard™ stops all that, saving money, preventing costly maintenance down-time, easing operator frustration and reducing other maintenance concerns, such as spillage and cleanup. It enables much easier, speedier mounting of equipment and provides a stable platform for equipment function. Operator and environmental exposure to noxious, toxic or dangerous fumes are also limited by quicker mounting with this economical time-saver.

Over multiple uses, the reusable ThreadGuard™ enables even larger savings by permanently preventing thread stripping, thread wear and other damage, thus extending useful equipment life. OEM manufacturers also supply the ThreadGuard™ to better serve their clients by safeguarding valuable equipment from loss due to repeated transfer from bung-hole to bung-hole, failure from usage vibration, wear or breakage from rough equipment handling and other causes.

Available in plated steel and 316 stainless steel, the two inch NPT thread ThreadGuard™ allows users of plastic mounted devices to manage equipment control much more carefully and cut the need for continuously purchasing replacements. Apparatus can even be permanently mounted in the ThreadGuard™ ensuring the best thread protection over the service life of the equipment. Easy tightening in drums, totes, tanks and other containers is permitted with it's "Wide-Hex" grip mounting feature. The 316 stainless steel model provides versatile use in most equipment applications covering a very wide chemical compatibility range for laboratories and clean rooms, food, beverage, pharmaceutical, chemical, cosmetic, bio-science, nuclear, aerospace, agricultural and other industries. An Npt to Buttress coarse thread version is also offered for plastic drums.
